HealthPrism™ includes predictive risk models for diabetes, hypertension, cardiovascular disease, opioid use disorder, depression, and many other health conditions. Importantly, HealthPrism™ provides upwards of 8 years of historical data to inform pathways and patterns critical to early identification, improved health outcomes, and reduced healthcare costs. HealthPrism™, formerly known as Opioid360™, was initially built in early 2019 to apply Deloitte’s predictive population health analytics capabilities to the opioid epidemic that had swept across the country.

In March of 2020, the HealthPrism™ team worked to transform Opioid360™ existing capabilities to combat the spread of COVID-19. Within a matter of weeks, the tool had been re-engineered and deployed to help state decision makers better understand populations most at-risk for COVID-19 complications and hospitalizations. HealthPrism™ is currently being used in multiple states and federal health organizations to support COVID-19 response and recovery.

ACT-IAC received 169 nominations for the 2021 Emerging Technology and Innovation Conference and HealthPrism™ was one of a number of innovations utilized in response to the COVID-19 pandemic. The Institute for Innovation is pleased to showcase HealthPrism™ and other Innovation Award winners. Stay tuned for information about other award winners in coming issues and join us in a round of applause for the HealthPrism™ team for their remarkable achievements.
