## Functional Area Description:
The objective of FITARA is to improve the management of IT within an agency and hence, improve the ability for that agency to deliver its mission securely and provide appropriate information access to the American public. To be most effective, IT must align to the functional needs of an agency and the agency’s organization and workforce strategies are tightly integrated to support the agency’s IT portfolio. In order to maximize the success of each program in meeting their unique business drivers, there needs to be cooperation and communication as organizational and workforce processes are integrated to reflect inclusion of all necessary inputs and to minimize unnecessary duplication. Further, IT management requires that the appropriate skills and experience be leveraged not only within leadership, but also throughout the workforce, by means of strategic planning and competency modeling. The workforce goes well beyond IT professionals, but includes acquisition, program management, finance, and others that are instrumental in supporting sound IT management. Workforce planning to meet mission and business needs, development of competencies needed throughout the workforce, and collaboration and decision making to address workforce developmental needs are key elements of maturity for the organization and workforce function.

Note: Yellow highlights identify linkages to the M-15-14 Attachment A: Common Baseline for IT Management and CIO Assignment Plan elements.

### Horizontal Integration:
Is there the proper level of involvement by all stakeholders, to include the CIO, CAO, CFO and CHCO, in the development and use of workforce planning processes, competencies models, and critical elements definitions? Are agency key critical elements included in bureau/component CIO evaluations?

Right Placement and Authority:

- Do agency CXOs have the proper organization placement and authority to ensure they are able to effectively drive organizational maturity in their area and in particular support the agency’s ability to effectively manage IT?

- The CIO is in the right organizational role and has the necessary roles, responsibilities and authorities.

- The CIO is part of the overall organizational strategic management team, and represents the organization in intergovernmental committees and before the public.

- C1. CIO reports to agency head (or deputy/COO). The CXOs meet regularly with the head of the agency or their deputy, providing strategic advice and counsel, and is afforded the necessary support and decision authority.

- The CXOs report directly to the head of the agency or their deputy. In addition, bureau/component and program-level CXOs have mirrored placement and authorities in their bureau/component or program.
